PLANT CARE SCHEDULING SYSTEM

Sproutly

Small routines. Thriving plants.
A responsive, weather-aware personal garden.

THE PROBLEM

Care should feel clear, not repetitive.

Before

Repeated full data and image loads.
Care notes confused with schedules.
Archived plants had no way back.

Sproutly

Change-only synchronization and stable images.
Explicit every-N-days routines.
Selective restore with fresh due dates.

CORE WORKFLOW

A routine with a reliable memory.

01

Add a plant

Light and location.

02

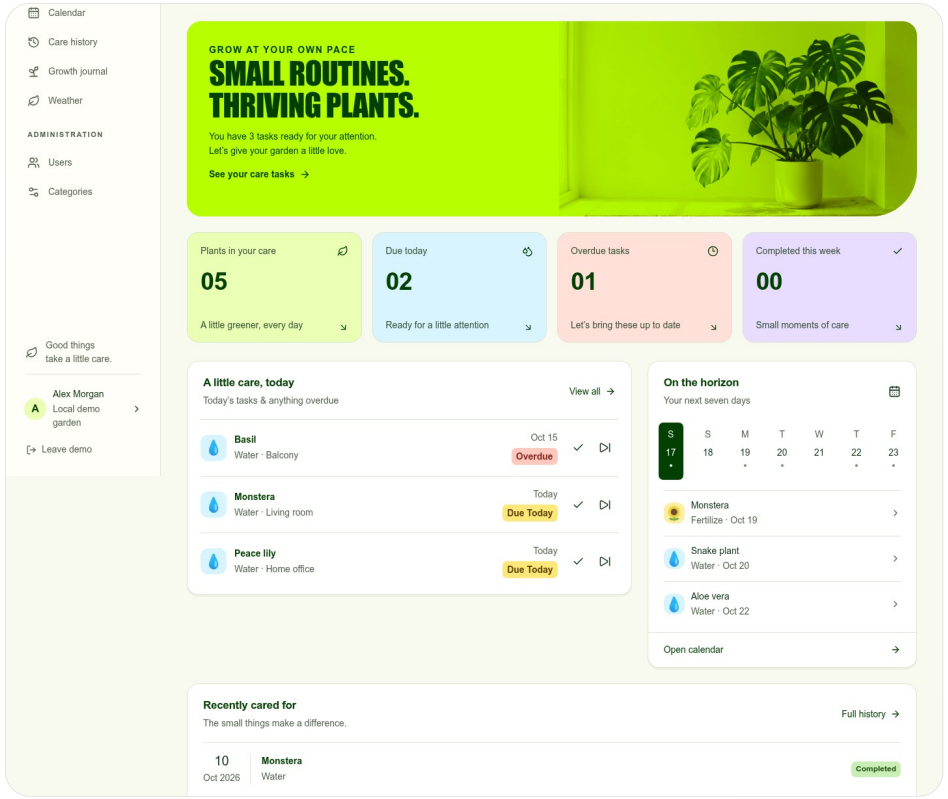

Set N days

Separate care routines.

03

Record and review

History and progress.

Local demo screenshot; fictional sample data.

LIGHT, VIBRANT, RESPONSIVE

A garden at a glance.

Lime and forest contrast inspired by Sweet Tape.
Colourful task types and emoji categories.
No breadcrumbs; clear navigation and back links.
In-app inbox with opt-in open-tab reminders.

ARCHITECTURE

Prisma without bypassing garden privacy.

01 Application boundary

Next.js and TypeScript.
Supabase verifies the session.
Prisma runs a transaction as authenticated.
Verified UID is transaction-local.

02 Data boundary

PostgreSQL RLS limits owner rows.
Composite foreign keys protect ownership.
Auth owns password hashing.
Private Storage uses owner folders.

CACHE AND CONNECTIVITY

Less reloading. Honest offline behavior.

While online

Keep workspace state across navigation.
Restore per-user same-tab cache.
Fetch changed rows and deletion IDs.
Use stable private image URLs.

When offline

Public service-worker fallback page.
Previously open views can remain visible.
No offline writes or queued task actions.
Never cache private pages in the worker.

WEATHER-AWARE, USER-CONTROLLED

Rain is a suggestion, not completed care.

A forecast never automatically marks watering done.

LOCATION

Permission-based or manual coordinates.

EVIDENCE

Fresh matching date, ≥60% chance and ≥1 mm.

SCOPE

Due outdoor watering only.

ACTION

User confirms “Skipped — rain”.

JOURNAL AND RESTORE

Keep the story. Restart safely.

01 Growth journal

Dated height and leaf observations.
Actual elapsed-day chart and exact table.
Captioned photo timeline/gallery.
Owner-scoped edit and delete.

02 Selective restore

Archive stops routines and retains history.
Choose routines explicitly on restore.
Next due starts one interval from today.
Ended routines remain stopped.

VERIFICATION

Evidence has a defined boundary.

Local tests are not production acceptance.

44 TESTS

Dates, validation, demo and actual SQL policies.

BROWSER SUITE

Desktop/mobile flows; deterministic weather fixture.

CHECKS

Strict TypeScript, lint and production build.

PENDING

Real Auth/email, Storage, Prisma and hosted-site tests.

NEXT: LIVE ACCEPTANCE

Ready for account-connected testing.

01 **Connect authorized GitHub, Vercel and Supabase projects.**

02 Apply migrations, configure environment and email redirects.

03 Verify two-user privacy, live uploads, caching and weather on HTTPS.

04 Rehearse the live presentation and keep the local demo as backup.
